

Wellness Proton PC App - Product Roadmap

This document outlines a roadmap for building a desktop wellness application ("Wellness Proton") focused on health tracking, reminders, nutrition, exercise, and productivity-oriented wellness features.

1. Competitor Analysis

MyFitnessPal – calorie tracking, food database, nutrition insights.

Google Fit – activity tracking and health integrations.

Samsung Health – sleep, exercise, nutrition, and wellness dashboard.

WaterMinder – hydration tracking and reminders.

Habitica – habit tracking with gamification.

Sleep Cycle – sleep monitoring and analysis.

Recommended Differentiators

- Desktop-first experience.
- Offline support with local database.
- Unified dashboard for all wellness metrics.
- Gamified streaks and achievements.
- Productivity + wellness integration.

2. Core Features (MVP)

1. Exercise Tracker
2. Vitamin & Medication Reminder
3. Sleep Schedule Monitoring
4. Meal Planner & Meal Schedule
5. Water Intake Reminder
6. Wellness Dashboard
7. Local Notifications
8. User Profiles

Suggested Tech Stack

Frontend: Proton + React

Desktop Shell: Electron or Tauri

Database: SQLite

State Management: Zustand or Redux

Charts: Recharts

Authentication: Supabase (optional)

3. Phase Roadmap

Phase 1 (Weeks 1-2)

Project setup, authentication, SQLite schema, dashboard layout.

Phase 2 (Weeks 3-4)

Water tracking, meal scheduling, vitamin reminders, notifications.

Phase 3 (Weeks 5-6)

Exercise logging, sleep tracking, analytics dashboard.

Phase 4 (Weeks 7-8)

Charts, streaks, achievements, settings, backups.

Phase 5 (Weeks 9-10)

API integrations and polishing.

4. API Opportunities

Nutrition / Calories

- Nutritionix API
- Edamam Nutrition API

Exercise Data

- WGER API

Health Integrations

- Google Fit APIs
- Apple Health (future mobile companion)

Notifications

- Native desktop notifications

5. Future Features

- AI wellness assistant
- Personalized recommendations
- Wearable synchronization
- Smart meal suggestions
- Community challenges
- Cross-device synchronization
- Subscription-based premium analytics

Recommended Launch Strategy

Release an MVP focused on reminders, hydration, meals, vitamins, and exercise logging. Add calorie APIs and advanced analytics after validating user demand.
